

Personal Air Conditioner

ITW Vortec

ITW Vortec's (Cincinnati, OH)

new Dual Action Personal Air Conditioner (PAC) is now available. The Dual Action PAC is coupled with a lightweight vest that delivers either cool or warm air to the wearer's torso and neck. By wearing the vest and PAC, industrial employees working in extreme temperatures can avoid the negative impact of low temperatures in winter as well as heat stress and fatigue in the summer. The increased comfort means no loss of worker productivity regardless of extreme temperatures, says the company. Since the Dual Action PAC offers both heating and cooling capabilities, it can be used in all seasons. Workers can adjust the Dual Action PAC to provide either heating or cooling. Thanks to vortex tube technology, the Dual Action PAC provides air temperatures ranging from 30 to 120 degrees F.
