

Vertical Machining Centers

Okuma America Corporation

Okuma America

Corporation (Charlotte, NC) now offers an expansive line of vertical machining centers that provide reliable machining meeting a variety of production needs. Okuma's new MU-6300V is no exception as it delivers high efficiency and high-productivity for 5-axis, multi-sided machining, says the company. This CNC vertical machining center has a highly rigid and accurate double column structure and low center of gravity in workpiece movement (trunnion table) that enable both heavy duty cutting and high speed finishing. Built on Okuma's Thermo-Friendly structure, this machine performs consistently from the first part to the last, regardless of warm up time or ambient temperatures.

For more information on the MU-6300V, visit www.okuma.com [1].
