

Adjustable Workbenches

IAC Industries

IAC Industries (Brea, CA) has introduced new economical versions of the company's height adjustable workbenches with the 930 Pro Series and 940 Pro Series workbenches. Pro Series workbenches from IAC Industries are best identified by a cantilever leg design and an adjustable height worksurface. Ergonomically, there is no dispute that the ability to precisely position of the worksurface reduces strain and fatigue in shoulders, arms, and the back, says the company. Both the 930/940 Pro Series incorporate a cantilever support system, housing the hydraulic lifters, that provides maximum leg and knee room by eliminating the front legs found on conventional benches. And the 180-degree rolled front edge for the worksurface provides a comfortable rest for forearms.
