

Overhead Lifeline Systems

Kee Safety, Inc.

Kee Safety, Inc. (Buffalo, NY) has introduced the KeeLine® Overhead Lifeline Systems to provide fall protection and support for one or two workers at elevated heights during construction and maintenance. The new KeeLine Overhead personal protection equipment (PPE) system mounts directly above the user for overhead applications. The system is comprised of a 5/16-inch thick 316 Stainless Steel wire and durable, low-maintenance electro-polished brackets with two permanently attached wheeled travelers. The brackets are installed into a suitable structure, including steel or concrete, and allow the wheeled traveler to run smoothly over those placed immediately along the wire. The travel line can be configured to allow single or multiple spans of up to nearly 78 feet between supports for use by one or two workers, according to Kee Safety.
