

Portable Cooling

Schaefer

Working near hot ovens in winter is comfortable. In summer, it can be dangerously hot. Facilities continue to invest in new equipment to improve production efficiency and process flow, rendering permanent HVAC systems designed for the original building layout ineffective. New OSHA standards for workers in hot environments, combined with safety and security regulations, put restrictions on common ventilation systems. **Schaefer's** (Sauk Rapids, MN) WayCool meets the needs of today's facilities. With up to a 20 degree temperature reduction, the portable unit can be strategically placed where it matters most.
