Splinter Guard Rods

Klein Tools

Klein Tools (Lincolnshire, IL) has introduced Splinter Guard Fish and Glow Rods, now with a proprietary protective coating to keep hands free of fiberglass splinters when wire pulling. Raw fiberglass shards become exposed when rods scrap against the sharp edges of electrical boxes, wire trays, and threaded rod. The protective coating safeguards hands from these painful fiberglass splinters. Extra durable and lightweight, Splinter Guard Rods are available in a variety of lengths and flexibilities. Also, the sections can be threaded together to customize the length needed for the job at hand—no tools needed. In addition, the improved luminescent rods glow two times longer and twice as bright in dark work spaces.
